

Code and Data Manipulation

Sublime Text, Excel, etc

- [Find and Replace with Regex](#)
- [Find Data in Cell](#)
- [Count Unique Values in Spreadsheet](#)

Find and Replace with Regex

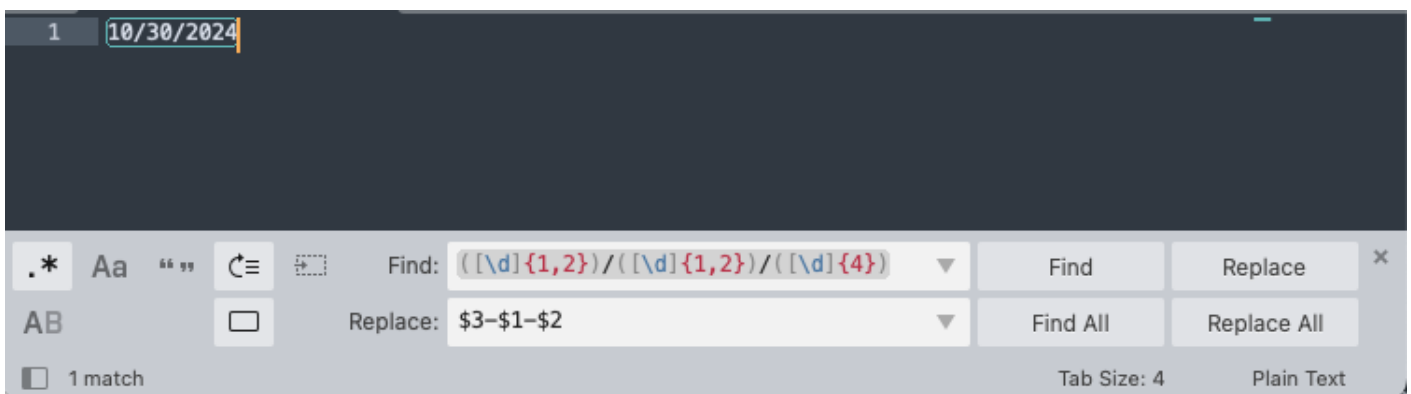

Regex to find date and time.

Option 1: `([\d]{1,2})/([\d]{1,2})/([\d]{4})` in format `mm/dd/yyyy`

Option 2: `[0-9]{4}-[0-9]{2}-[0-9]{2}T` in format `yyyy-mm-dd`

Option 3: `([0-1]?[0-9]|2[0-3]):[0-5][0-9]` in format `HH:mm`

In Sublime Text Find and Replace (CMD+OPT+F) replace with `$3-$1-$2`

This replaces date `mm/dd/yyyy` with `yyyy-mm-dd`

The below will verify email address format.

Simple:

`[\w\-\.\+@]([\w\-\.\+@]{2,4})`

Complex

`^(?:(?!.*[.]{2})[a-zA-Z0-9](?:[a-zA-Z0-9.!\%]{1,64})|\"[a-zA-Z0-9.!\% -]{1,64}\")@[a-zA-Z0-9][a-zA-Z0-9.-]+(\.[a-z]{2,}|\.[0-9]{1,})$`

GUID, alphanumeric 8-4-4-4-12

`[0-9A-Fa-f]{8}-[0-9A-Fa-f]{4}-[0-9A-Fa-f]{4}-[0-9A-Fa-f]{4}-[0-9A-Fa-f]{12}`

Find Data in Cell

This document is in development

`SEARCH` finds `"text value"` in cell `A1`.

`IF` result of `SEARCH` is that the data is found, result returns `TRUE`. Else, `FALSE`.

```
=IF(SEARCH("text value",A1,1),TRUE,FALSE)
```

Count Unique Values in Spreadsheet

This document is in development

`UNIQUE` finds the unique values in a spreadsheet row or column.

`COUNTA` counts the results of `UNIQUE`, result returns a numeric value.

`=COUNTA(UNIQUE(A1:B100))`
